

LISTING OF THE CLAIMS

Claims pending

- At time of the Action: Claims 1-20.
- After this Response: Claims 1-10 and 12-20.

Canceled or Withdrawn claims: Claim 11.

Amended claims: Claims 1, 10, and 12.

New claims: None.

1. (Currently Amended) A receiver, comprising

an input portion configured to receive a first signal transmitted by a first transmitter;

a processor in communication with the input portion for converting the first signal to an audio signal, the processor further comprising a control module for processing an input command;

a user interface in communication with the processor, wherein the user interface is configured to receive the input command and to convey the input command to the processor;

a control module executed by the processor for processing the input command and generating a query in accordance with the input command; and

a network interface in communication with the processor configured for facilitating communication ~~between~~ from the receiver and to the first transmitter via a network and communication from the first transmitter and to the receiver via [[a]]the network, wherein the query is communicated from the receiver to the first transmitter via the network and wherein the receiver is configured to receive a

1 response message from the first transmitter, the response message generated in
2 response to the query.

3
4 **2. (Original)** The receiver of claim 1, wherein the first transmitter is a
5 digital radio broadcast station.

6
7 **3. (Original)** The receiver of claim 1, wherein the input portion is
8 configured to receive a second signal from a second transmitter.

9
10 **4. (Original)** The receiver of claim 3, wherein the second transmitter is a
11 satellite.

12
13 **5. (Original)** The receiver of claim 1, wherein the input portion is
14 configured to receive a third signal from a third transmitter.

15
16 **6. (Previously Presented)** The receiver of claim 5, wherein the third
17 transmitter is a repeater.

18
19 **7. (Original)** The receiver of claim 1, wherein the processor is configured
20 for establishing a two-way communication path between the receiver and the first
21 transmitter.

22
23 **8. (Original)** The receiver of claim 1, wherein the processor generates a
24 packet according to the input command and transmits the packet to the first
25 transmitter via the network.

1 **9. (Original)** The receiver of claim 8, wherein the packet comprises an
2 identification address of the receiver.

3
4 **10. (Currently Amended)** A system, comprising:
5 a digital radio broadcast transmitter;
6 a server and a database in communication with the digital radio broadcast
7 transmitter, wherein the database includes information related to a digital radio
8 broadcast; and

9 a receiver in communication with the digital radio broadcast transmitter and
10 configured to receive an input command comprising a request for information from
11 the database;

12 wherein the receiver is configured to establish a two-way communication path
13 with the digital radio broadcast transmitter via a network and wherein the receiver is
14 further configured to receive a response message from the digital radio broadcast
15 transmitter, the response message generated responsive to the request for
16 information.

17
18 **11. (Canceled)**

19 **12. (Currently Amended)** The system according to claim 10,
20 wherein the receiver further comprises:

21 an input portion configured to receive a first signal transmitted by the
22 digital radio broadcast transmitter;

23 a processor in communication with the input portion for converting
24 the first signal to an audio signal, the processor further comprising a control
25 module for processing [[an]]the input command;

1 a user interface in communication with the processor, wherein the user
2 interface is configured to receive the input command and to convey the input
3 command to the processor;

4 a control module executed by the processor for processing the input
5 command and generating a ~~query~~the request for information in accordance
6 with the input command; and

7 a network interface in communication with the processor configured
8 for facilitating communication between the receiver and the digital radio
9 broadcast transmitter via the network, wherein ~~the query~~the request for
10 information is communicated from the receiver to the digital radio broadcast
11 transmitter via the network.

12
13 **13. (Original)** The system of claim 12, wherein the input portion of the
14 receiver is configured to receive a second signal from a second transmitter, and
15 wherein the second transmitter is a satellite.

16
17 **14. (Original)** The system of claim 12, wherein the input portion of the
18 receiver is configured to receive a third signal from a third transmitter, and wherein
19 the third transmitter is a repeater.

20
21 **15. (Original)** The system of claim 12, wherein the processor is
22 configured for establishing a two-way communication path between the receiver and
23 the digital radio broadcast transmitter.

1 **16. (Original)** The system of claim 12, wherein the processor generates a
2 packet according to the input command and transmits the packet to the first
3 transmitter via the network.

4
5 **17. (Original)** The system of claim 10, wherein the network comprises a
6 packet switched network.

7
8 **18. (Original)** The system of claim 17, wherein the network comprises the
9 Internet.

10
11 **19. (Original)** A method of establishing a feedback loop in a digital audio
12 service system, the method comprising:

13 requesting information from a digital radio broadcast station via a user
14 interface portion of a satellite digital audio service receiver;

15 formulating a query for the information based on an input signal from the
16 user interface;

17 transmitting the query from the receiver to the digital radio broadcast station
18 via a network; and

19 in response to the query, receiving a response to the query from the digital
20 radio broadcast station at the receiver.

21
22 **20. (Original)** The method of claim 19, further comprising executing a
23 database look up at the digital radio broadcast station based on the contents of the
24 query and retrieving the requested information from the database.
